This is a graded discussion: 10 points possible   **due Dec 15**
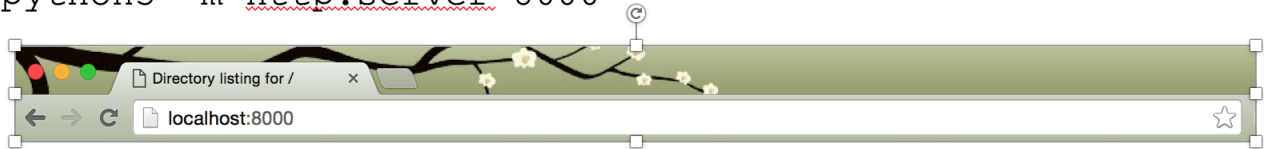

Assignment 4   # Host your webpage on GitHub

Where? How? have you been testing your website so far... In this week's assignment -- you'll use Github. You may have been following this:

```
> python -m SimpleHTTPServer 8000

> python3 -m http.server 8000
```

To test your web page, run the above command from the folder in which your project is located. If your page has an `index.html` file, it will appear automatically. Otherwise, add the desired html file to the end of the web address or navigate to it in the browser.

But do the following for this week's discussion post.

Create a Github account, and follow the links below to create a simple site (example, what you turned in last week).

https://docs.github.com/en/github/working-with-github-pages/creating-a-github-pages-site ↪

https://medium.com/@svinkle/publish-and-share-your-own-website-for-free-with-github-2eff049a1cb5#:~:text=GitHub%20is%20not%20only%20a,%2C%20CSS%2C%20and%20JavaScript%20projects! ↪

You can use vscode along with Github. vscode to test and Github to host.

In the discussion post below type the link to your github website. For example: https://[username].==github==.io/
